

pearly®

**99.3% reliable
contraception
without side effects.**

Only one minute every day

pearly® is a small and easy alternative for reliable contraception. With a size of 7 x 10 cm the battery-operated pearly® is small enough to fit into any handbag. Perfect for active women on the go.

Based on oral temperature readings taken with its integrated sensor, the contraception computer recognizes your fertile days and shows you when intercourse may lead to pregnancy by giving you RED light.

We say NO to hormones!

On average a woman can become pregnant on six days per cycle – five days before ovulation and on the day of ovulation. In order to avoid pregnancy in this short period of time, many women accept day in, day out, considerable compromises to their health, putting a heavy strain on their health or their sex life with un-natural contraceptive measures. Does it have to be that way? We say: no!

99.3 % effective

pearly® is 99.3% effective right from the start the contraception computer has a Pearl-Index of 0.7.

Easy

Take your temperature (BBT) every morning immediately after you wake up by placing the thermometer sensor under your tongue for 50 to 60 seconds.

If you happen to menstruate press the + key. Otherwise, press –.

Using extensive data collected during more than 25 years of research and development and referencing it against your daily temperature readings, the computer uses a bio-mathematical projection method to calculate your individual cycle and provide you with a reliable forecast for the next 24 hours.

- Green means “infertile”
- Red means “fertile”
- Yellow means that the computer is still in its learning phase

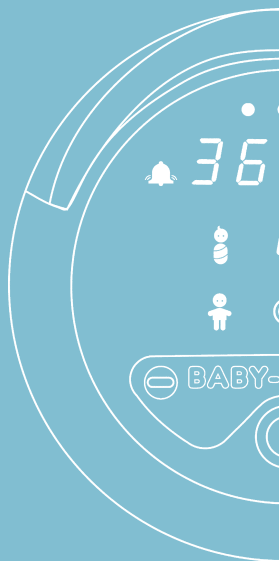

Value

- One time investment
- NO follow-up costs
- Over 10 years life expectancy
- High Quality – Made in Germany
- Life-long service support
